## EDUCATION

### University of California, Santa Cruz

Bachelor of Science in Computer Science and Game Design

Master of Science in Computer Science and Engineering

Santa Cruz, CA

Sep 2021 – Jun 2025

Sep 2026 – Expected Jun 2028

## PROFESSIONAL EXPERIENCE

### Technical Solutions Engineer

Jun 2026 – Present

Bright Data

Remote

- Own technical delivery for a major enterprise customer, supporting **real-time production workflows** across Python, JavaScript, REST APIs, and web data pipelines.
- Troubleshoot customer integrations end-to-end, responding to **live production issues** and identifying workflow improvements across complex data collection systems.
- Partner with customer engineers and internal **Product and R&D** teams to translate technical requirements into solutions that improve reliability and scalability.

### Product Support Engineer II

Sep 2025 – Jun 2026

Bright Data

Hybrid

- Resolved complex **API, web collection, and data pipeline issues** for global enterprise customers using Python, JavaScript, C#, and REST APIs.
- Investigated and deployed **real-time production fixes** through collector hotfixes, scraper code changes, MCP fixes, and site-unblocking mechanisms to restore customer workflows.
- Reproduced integration failures and partnered with engineering teams on permanent fixes, product improvements, and more reliable customer workflows.

### Software Engineer Intern

Jan 2025 – Jun 2025

UXLY Software

San Francisco, CA

- Developed a multi-agent e-commerce platform using **Python, LangChain, LlamaIndex, and RAG** for context-aware product search, support, and recommendations.
- Built full-stack **cart and order management** workflows with REST APIs and JWT authentication, enabling secure natural-language interactions.
- Implemented input/output guardrails and wrote **unit and benchmark tests** to validate system reliability and performance.

### Full Stack Software Developer

May 2025 – Aug 2025

jLabs ENTs Research, UC Santa Cruz

Santa Cruz, CA

- Developed **DirtViz**, a full-stack application leveraging IoT sensor data to monitor environmental conditions and support sustainable agriculture research.
- Built full-stack features using **React (MUI)** and a **Flask REST API**, containerized via Docker for deployment and testing.

## PROJECTS

### Body & Soul (2v2 Top-Down MOBA) | Unity 6, C#, Photon

Jan 2025 – Mar 2025

- Developed a **2v2 online arena MOBA** inspired by League of Legends' Arena mode, where tethered champions rely on positioning, synergy, and coordination to win fights.
- Implemented **C# gameplay systems** for champion abilities, cooldowns, hit detection, scaling stats, and progression.
- Built modular stat and upgrade systems with **real-time multiplayer synchronization** using Photon and coordinated team development as Scrum Master.

### SlugRush Gym Tracker | Next.js, FastAPI, PostgreSQL, Supabase, Docker

Mar 2025 – Jul 2025

- Led development and project management for a full-stack application providing **real-time gym occupancy and historical crowd trends**, scaling to **5,000+ users** after launch.
- Built the FastAPI backend, scheduled data collection, and PostgreSQL storage pipeline supporting real-time and historical occupancy data.

## TECHNICAL SKILLS

**Languages:** C++, C#, Python, Java, JavaScript, TypeScript, C, SQL

**Frameworks & Tools:** Unity, Photon, Node.js, React, Next.js, FastAPI, Flask, Docker, Git, Postman

**Engineering:** REST APIs, Unit Testing, Benchmark Testing, Agile/Scrum, Full-Stack Development
